Organic & Natural Lawn Care

Chippers is certified by the NH-DPC to treat lawns, ornamentals and trees in the NH Lakes Region watershed. Our precise use of organic and traditional products around these vital water resources extends to each and every client's landscape, exemplifying our commitment to the environment while providing our clients with results they expect.*

Aeration • Core aeration improves availability of air, water and nutrients while enhancing root generation by removing plugs from the lawn.

Compost Tea • *Organic* • See reverse side for details.

Disease Control • *Natural or Organic* • Effectively targeting damaging lawn diseases such as *leaf spot*, *summer patch* and *red thread*, either before they occur or during an infestation.

Fertilizer • *Natural or Organic* • Applications of our slow-release, zero phosphate, natural or organic fertilizer are important from spring through late fall. Provides key nutrients and promotes proper new root and shoot growth.

Fungicide • *Organic* • Our dual action organic fungicide stops existing disease activity within hours plus triggers the natural defenses of grass.

High Calcium Lime • *Natural* • High calcium lime improves pH, seed germination, disease resistance and reduces soil compaction.

Insect Control • *Natural or Organic* • Surface insect control targets ticks, grubs and other damaging insects. USDA National Organic Program (NOP) compliant product.

Iron • *Natural* • An essential micronutrient that reduces moss in lawns. For outstanding aesthetics and special events, iron quickly adds a deep green color to the turf.

Overseeding • *Natural* • Thickens the density of an existing lawn by adding superior grass blends after aeration.

Weed & Moss Control • *Natural or Organic* • Our selective herbicide safely reduces weeds and moss.

**Squam, Sunapee, Waukegan, Wicwas, Winnepesaukee, Winnisquam and Paugus Bay*
